WINDOWS SHARED WEB HOSTING PRODUCT SHEET

Update: 05.01.2015
Version 5.2

1. Solutions benefits

1.1. For the customer

1.1.1. General information

Windows Shared Web hosting uses the latest in Microsoft Windows Server Technology giving you a wide range of licensed and well-designed options for your website.

Websites designed to work with .Net or Visual Basic languages are able to work with Windows hosting; however Linux/Unix based websites are not compatible with Windows hosting.

Windows hosting service is the perfect match when using Microsoft based products and services. It is also ideally suited when working with MS SQL and Access databases and allow for fast and easy setup

 Windows Server [®] 2008 R2			
Manageability	Security	Stability	Better Web Experiences

1.1.2. Windows Web Hosting features

With Windows hosting you benefit from installation of free applications via your Control Panel; such applications include DotNetNuke, ScrewTurnWiki and BlogEngine.NET.

DotNetNuke

DotNetNuke is the leading open source ASP.NET CMS. A content management system and .NET web application development framework which offers a free CMS.

ScrewTurnWiki

ScrewTurn Wiki is a popular, open source Wiki software application that lets you create, manage and share your own collaborative wikis. Based on ASP.NET

BlogEngine.NET

BlogEngine.NET is one of the simplest and most light weight ASP.NET blog at the moment. It is full featured and easy to use.

1.2. For the Sales Partner

Reselling Windows web hosting together with Linux web hosting will ensure that you have a solution to any requests a customer may have regarding hosting a website. You can cater for both platforms showing your customers that you are committed to offer the widest possible range of products for the best price.

Our web hosting solutions use a 3 tier structure, which presents functionality for administrators, resellers, and end-user website owners, in managing the various aspects of website and server administration through a normal web browser

1.2.1. General information

Windows based web hosting is perfect for websites that want to use .Net technology or Microsoft Database technology like Microsoft Access or MS SQL. Microsoft FrontPage support is included with PHP and .NET supported. All and all this is a very complete, fast and robust web hosting solution.

The shared web hosting service helps you rapidly deploy hosting solutions, offering everything you need to easily create and deliver these solutions — software, services, recommended server configurations, and more. Shared web hosting features include:

- Storefront integration with domain name registration
- Automated ordering and provisioning
- Advanced billing capabilities
- Workflow for reseller and customer events
- Integrated marketing campaigns
- Customer self-service through a web-based control panel
- Customized service plans
- One-Click application installation
- Best-in-class SiteBuilder capabilities

1.2.2. Target market and potential customers

The shared web hosting service is a comprehensive, "out-of-the-box" solution that will help you rapidly deploy web hosting solutions for your small and medium-sized business customers. A self-service, Web-based control panel for end users enables them to manage their hosting and order new services with immediate delivery. We offer a complete shared hosting solution for users that do not want to manage servers, install server software, security updates, handle technical support, or cope with other technical aspects of the services.

With our new, optimized and scalable hosting plan we are able to offer you the basic and advanced features in one complete web hosting plan at a competitive price.

Pre-installing applications enables you to package and price them according to your own standards and start offering the perfect bundle for your customers to be successful online.

The ideal Shared Web hosting customer profile

Be it SMBs looking for a secure and solid online presence, Web designers, trusted advisers, bloggers, online shops, or existing online businesses, the ideal Web hosting customer wants more than simple website hosting but a state of the art solution complete with CMS.

Such a customer:

- Is committed to a subscription-based pricing model
- Prefers to pay monthly, or yearly
- Aspires to strong customer support on hosting and knowledge on CMS
- Prefers the added value of a real partnership and not just a vendor relationship
- Is willing to pay for value
