Small Office Security

PRODUCT SHEET

Update: 15.03.2016

Version: 1.0

1. Solution benefits

1.1 General information

Kaspersky Small Office Security is designed for even the most non-technical person to install and run with ease. It's packed with straightforward 'wizards' to automatically guide you through things like setup, including removing any existing anti-malware; setting the controls and choosing the policies that work best for you and your business; automatically downloading of these changes onto several computers at once.

It is the only IT security solution that's specifically designed for smaller businesses and combines award-winning anti-malware plus special technologies that protect more of the things that matter to you. Everything is administered through a web-based dashboard so that you, or anyone else you choose, can manage your IT security remotely through the internet.

1.2 Product Features

Defends laptops, desktops & servers against malware

By combining real-time, cloud-assisted technologies plus powerful anti-malware technologies that run on your devices, Kaspersky Small Office Security defends your business against the very latest malware threats.

Simplifies security – including remote management

Cloud-based console makes it simple to set up and manage vital security functions – across all your PCs, file servers, Mac computers and Android phones & tablets without any need for any specialist IT skills. Because this cloud-based management console can be accessed via the Internet, your off-site staff – or your external IT support consultant – can set up and manage your IT security.

Extra security for online banking and payments

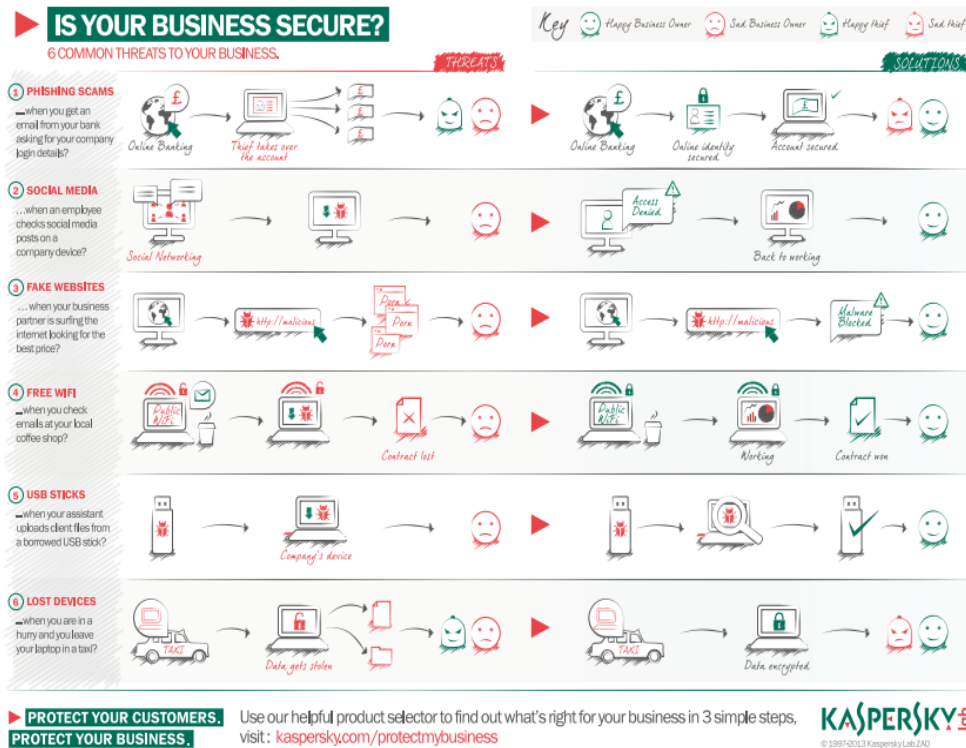

Online financial transactions can give cybercriminals an opportunity to steal money and banking details. Kaspersky Small Office Security helps keep your money, credit card numbers and bank account information safe. It adds an extra layer of security for online banking Blocks 'keyloggers' from capturing your passwords.

Prevents leakage of company & customer information

To protect valuable and sensitive information, Kaspersky Small Office Security encrypts data on PCs & file servers – to protect your data; backs up data – plus online backup – for data recovery and manages, securely stores & synchronizes all your passwords.

Secures businesses against phishing & Internet risks

Kaspersky Lab's latest Internet security safeguards your company information, computers and mobiles. Protects against fraudulent websites trying to steal from you; warns you about suspicious files and dangerous website links; saves you time – by filtering out annoying spam messages.
