DOMAIN NAME REGISTRATION PRODUCT SHEET

Update: 05.01.2016
Version 1.00

1.2.2. Registration

During the registration process, LuxCloud registers a domain name at the appropriate registry. The end-user remains the 'owner' of the domain name. There are two kinds of TLDs, generic (gTLD) and country (ccTLD) top level domains. Prices and procedures regarding registrations can vary from one registry to the other. LuxCloud has currently selected the mostly used and automated TLDs. Find the complete list and pricing in Chapter 1.3 of this document.

1.2.3. Transfers

Transferring a domain can take from 1 minute up to 6 weeks, and can be a simple procedure but can also take a longer time. LuxCloud has many years' experience of domain registration and therefore also the know-how to ensure you get the expected results.

1.2.4. Top level domains

LuxCloud offers a large array of international top-level domains (TLDs) from a single source.

- gTLD: A generic top-level domain is one of the categories of top-level domains (TLDs) maintained by the Internet Assigned Numbers Authority (IANA) for use in the Domain Name System of the Internet.
- ccTLD: A country code top-level domain is a domain generally used by or reserved for a country, a sovereign state, or a dependent territory.

Domain Name Registration (€)
