

PRODUCT SHEET

Update: 17.01.2017

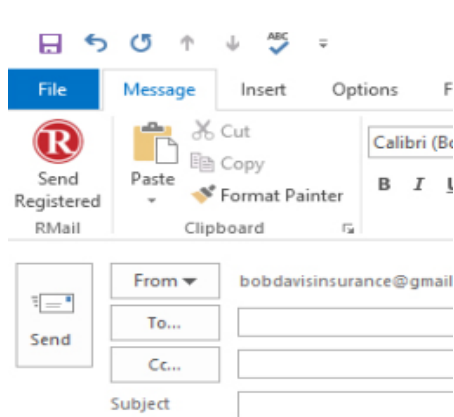

Version: 1.0

1. Solution benefits

1.1 General information

RMail is a great tool which provides businesses with simple-to-use email tracking, certified delivery proof, email encryption, electronic signatures, secure large file transfer functionality and more. It works seamlessly and assures high value electronic correspondence with users' existing email platforms, including Microsoft Outlook, Office 365, Gmail, and more. No special software or account registrations are needed on the recipient end.

Instead of adding and managing separate services used for email encryption, e-delivery proof, e-signatures, and large file transfers, you can now implement a single solution. The deployment of RMail is simple and quick. It simply adds a "Send Registered" button above the traditional "Send" button in end users' Outlook (as an example) compose window, providing convenient access to all RMail sending options.

RMail installs as an Add-in into Microsoft Outlook without requiring any changes at the server level.

1.2 Customer benefits

Simple Email Encryption

Easy way of sending encrypted, secure emails both from sender's and recipient's perspective.

Proof of compliance and certified e-delivery

RMail's Registered Receipt™ record proves compliant encrypted delivery with privacy laws such as HIPAA, as well as the time of delivery, and exact content.

Cost reduction

Dependence on expensive courier and postal services for delivery certification is reduced.

Faster deals

E-signature option provides faster turnaround times on agreements and offers extra convenience for signers and signees.

Convenient collaboration

LargeMail™ file transfer feature combines the convenience of emailing file attachments with the power of a 3rd party file transfer service.

All-in-one solution

Simple and affordable service, which addresses all high-value email needs.

1.3 Product key features

Email Encryption

- 256-bit AES message level encryption
- True direct delivery of encrypted message to recipient's inbox
- Automated system-generated password or custom passwords
- Registered Receipt™ email record
- Support for TLS-automation for encrypted delivery options

Track & Prove

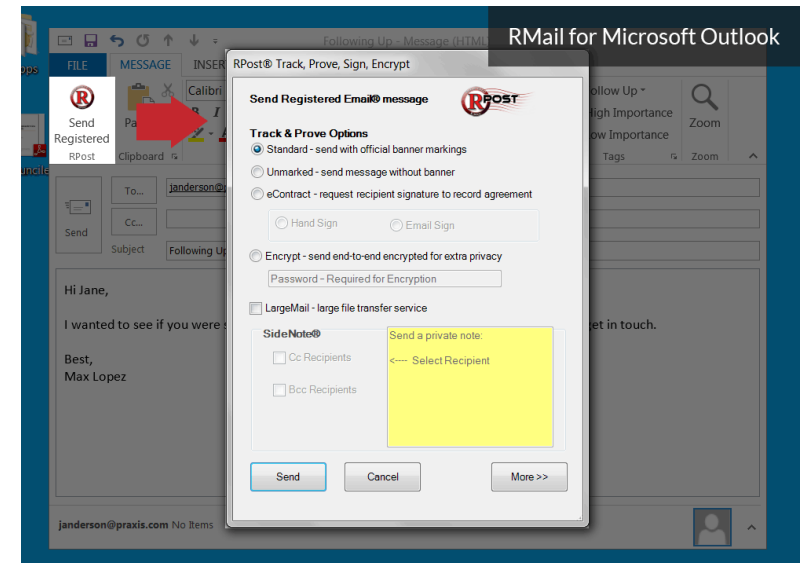

- Timestamped open and delivery reports
- Option to send marked with "Registered Email" banner
- Proof of delivery, time of delivery, and exact content
- Delivery audit trail
- Message authentication & reconstruction

E-Signatures

- Documents can be sent for electronic signing
- Hand sign, type-to-sign, and click-to-sign signing options
- Support for single and multi-party signoff
- Sequential or first-come-first-serve signing

Other Features

- LargeMail™ certified and secure file transfer option allows files up to 1GB to be sent directly from sender's compose window
- PDF conversion option allows the conversion of any Microsoft Office document to PDF en route to the recipient
- SideNote® private notes enable sender to append a private yellow "sticky" note to an email that is only visible to CC'd or BCC'd recipients
- DigitalSeal® sender authentication proves sender identity, authorship, timestamp, and original content
- Metadata removal option removes hidden metadata from document attachments for privacy protection
- Automated usage reports allow insight into usage levels and patterns
